Plastic Partitions

- Solid Plastic
- Arch Solid Plastic

Lockers

- Emperor (Corridor) Lockers
- Gladiator (Athletic) Lockers
- Replacement Front

Heavy-Duty Continuous Hinge

Self-closing, non-handed, gravity hinge.
Heavy-duty (16 gauge) material.
Available in powder coated or brushed stainless steel.
Stainless steel hinge pin.
Offers a "No-Sightline" feature on hinge side of door.
This economically priced hinge is ideal for high-abuse areas where extra strength and durability are a concern.

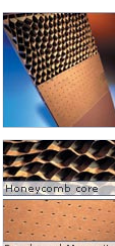

The "No-Sightline" Solution

Features a full-length, heavy-duty continuous door-stop and full-length hinge side filler to completely eliminate sightline gaps.
Full-length rubber bumper on stop deadens sound and protects against wear.
Available in powder coated and brushed finish to match stainless steel material.
The continuous hinge can be used in place of the hinge side filler for privacy and added strength.

Masonite Reinforcement

Available for doors, panels, and pilasters.
1/8" (6mm) peg-board Masonite is bonded to the inner surface of material walls to encase the dense 1" (25mm) honeycomb center.
Masonite reinforces the product's surface sheets while absorbing shocks better than plywood alternatives.
Ideal for damage-prone locations, Masonite reinforcement increases the dent resistant toughness of doors, panels and pilasters beyond their already tough design.
Significantly less expensive than Phenolic and Plastic options.

Hardware & Channel Options

Stainless Steel Hardware

A hardware package with brushed stainless steel wall brackets, hinges and fasteners is available. Standard brackets and hinges are zinc-cast, plated and brush finished to match Hadrian's stainless steel doors, pilasters and panels.

Full Length Channels

To completely eliminate sightline gaps, continuous full-length channels are available in place of brackets at all panel to wall, panel to pilaster, and pilaster to wall connections. Used in conjunction with Hadrian's "No-Sightline Solution", continuous channels offer the ultimate in privacy. Both Wall and Pilaster channels are available in 1" (25mm) and 3" (76mm) depths.

Stainless Steel Finishes

Stainless steel and Embossed stainless steel material add style, sophistication and durability to any installation.

Stainless Steel
Type 304, #4 brushed

Hadrian's stainless steel design offers long lasting beauty, gleaming modern appearance, and easy to clean maintenance.

Embossed stainless steel

Embossed stainless steel enhances the atmosphere of any location. The unique pattern adds rigidity while resisting abrasions, smudges and fingerprints. Light and heat are diffused while acoustical qualities are enhanced.
